## Current Op'nl Sea Ices

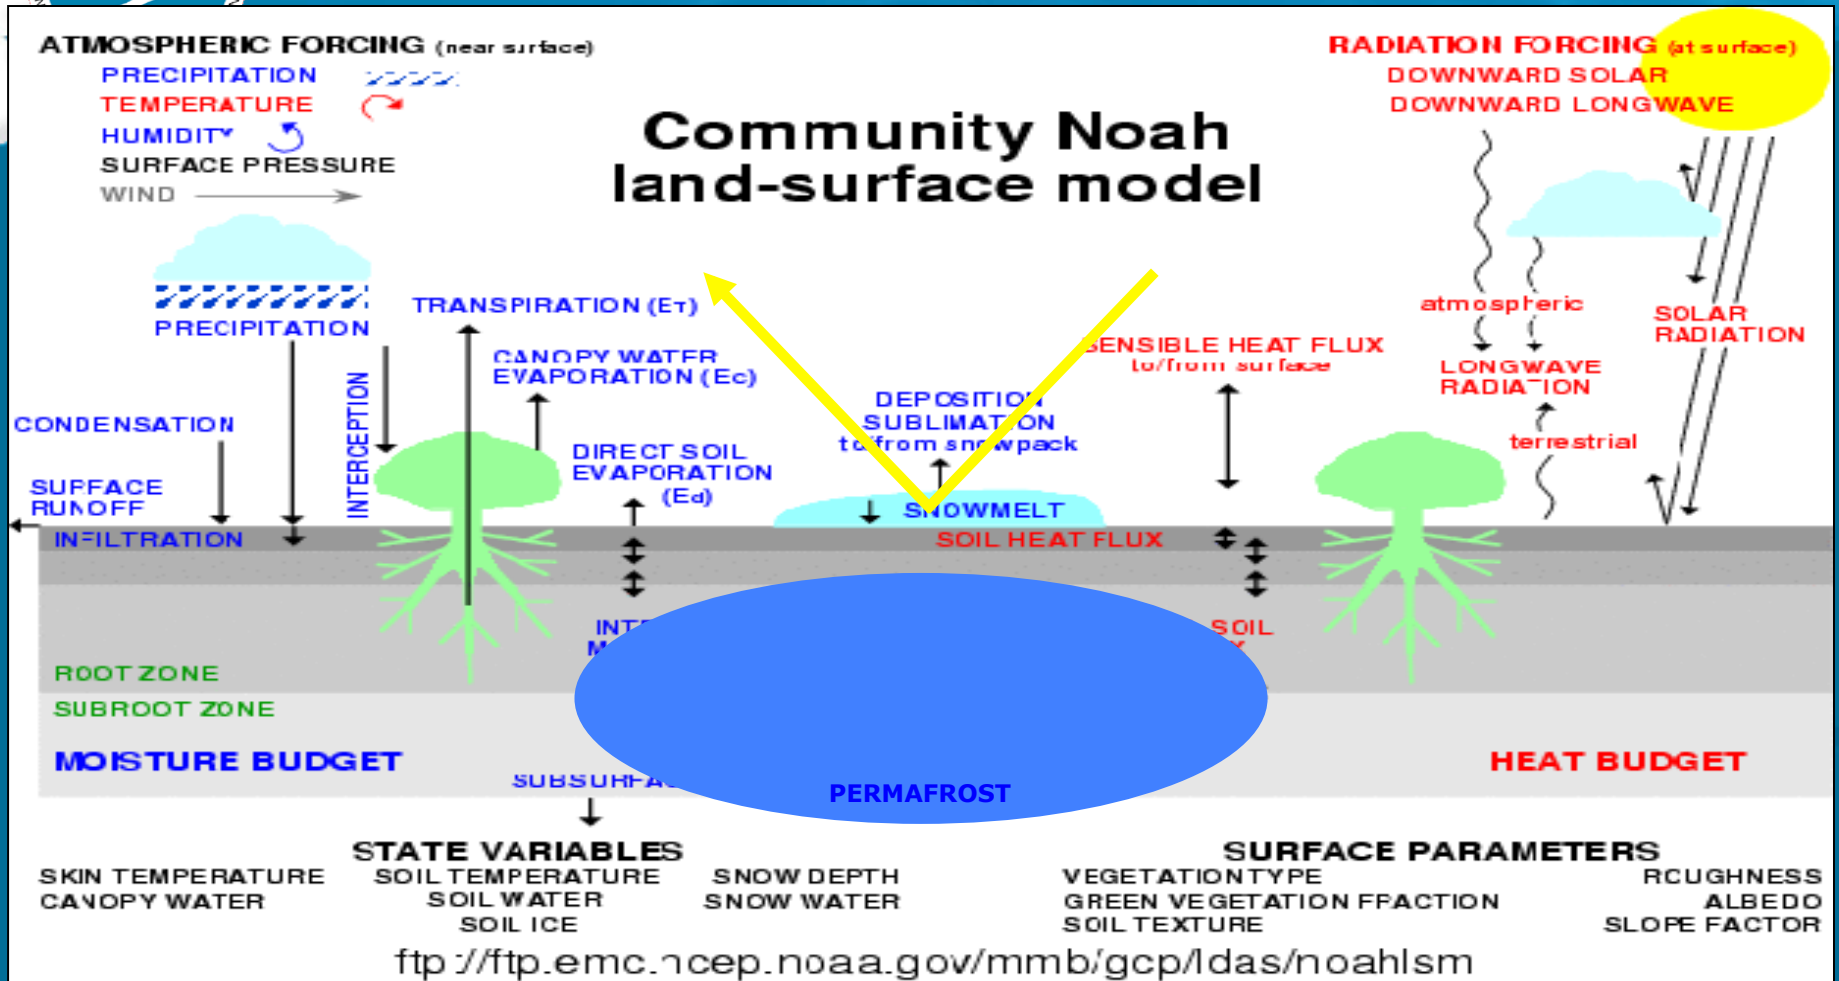

Model	Dynamics	Thermodynamics	Range
NAM	None	3m ~land (NoAH)	84 hr
GFS	None	Thickness, not concentration	384 hr
CFS	GFDL	GFDL	9 months
RTOFS Global	None	Energy Loan	120 hr
Drift	Free Drift	None	384 hr

# NCEP-NCAR unified Noah land model

- Noah land model: relevant land physics & assoc. land data sets; lower boundary conditions (heat, moisture, momentum) for NAM, GFS, CFS.
- Arctic conditions: tundra vegetation, improve snow/ice processes (melt-freeze, snow age/albedo, permafrost), hydrology/river-routing.

## Drift Skill – Error Radius

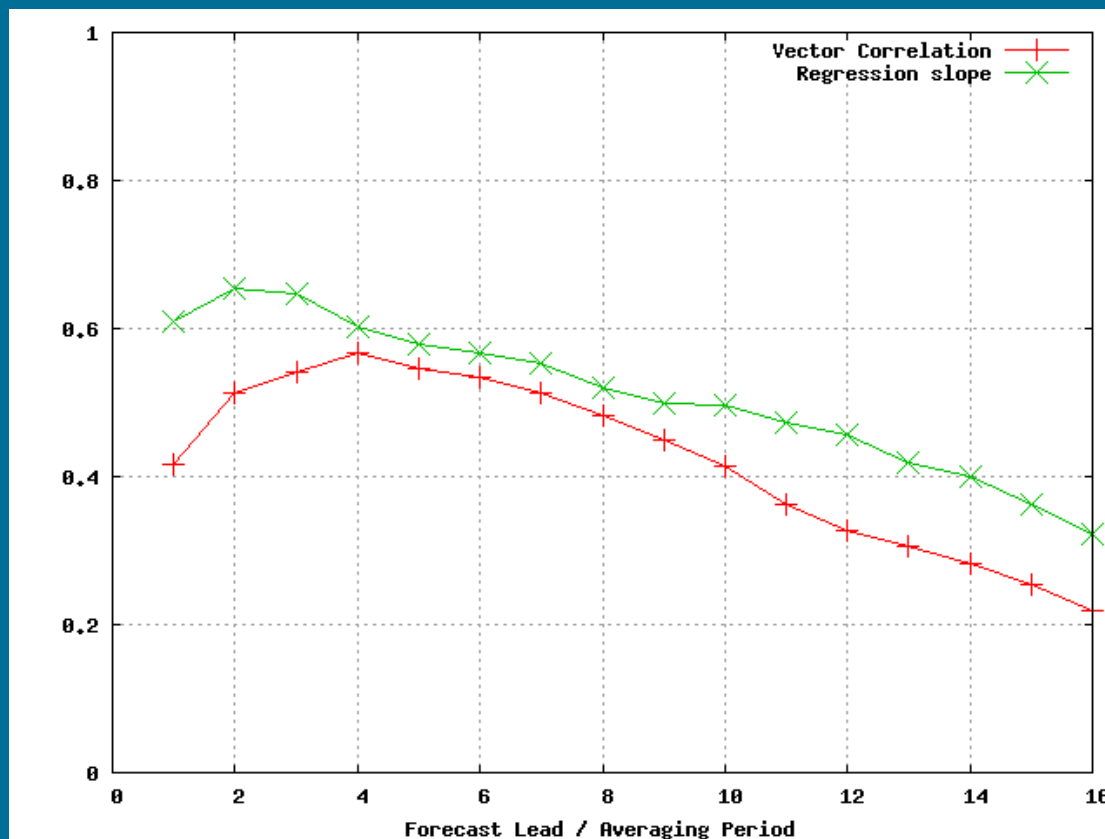

Model	Year	24 hrs	48 hrs
NCEP	2010	6.3 km	12.5 km
NCEP	2009	4.7 km	8.8 km
PIPS 2.0	2008	7.2 km	
ACNFS	2008	6.6 km	
NCEP	2008	4.7 km	8.7 km
